AMDT REVAMP REPORT

DONE BY THIHAN GAMAGE

ACKNOWLEDGMENT

- I hereby would like to thank, AMDT and lecturers for the resources and teaching required skills and assistng me. My parents for providing with necessary resources. My friends for the support to make this project a success.

CONTENT

TOOLS USED FOR WEB DEVELOPMENT

VISUAL STUDIO CODE

- I used visual studio code to create my website.

- **Visual Studio Code** is a free source code editor made by Microsoft for Windows, Linux and macOS. Features include support for debugging, syntax highlighting, inteligent code completion, snippets, code refactoring, and embedded GIT.

GITHUB

- GitHub is a web improvement stage enlivened by the manner in which you work. This apparatus permits engineers to audit code, oversee ventures, and manufacture programming.

Features:

- Facilitate effectively, remain adjusted, and complete GitHub's undertaking the executives instruments

- It extends to right instruments for the employment opportunity

- Simple documentation close by quality coding

- Developers can host their documentation directly from repositories

BOOTSTRAP

- Bootstrap is a free and open-source CSS system coordinated at responsive, portable first front-end web advancement. It contains CSS-and (alternatively) JavaScript-based plan formats for typography,forms, buttons, navigation and other interface parts.

- Bootstrap is the seventh-most-featured venture on GitHub, with in excess of 142,000 stars, behind freeCodeCamp (right around 312,000 stars) and possibly behind Vue.js system. As per Alexa Rank, Bootstrap is in the best 2000 in the USA while vuejs.org is in the best 7000 in the USA

USABILITY PRINCIPLES I HAVE USED

VISIBILITY OF SYSTEM STATUS

- The visibility of system status alludes to how well the condition of the system is passed on to its clients. Preferably, systems ought to consistently keep clients educated about what is happening, through fitting criticism inside sensible time.

- The Website always keeps users informed about what is going on through feedbacks within short time.

Only relevant data is displayed
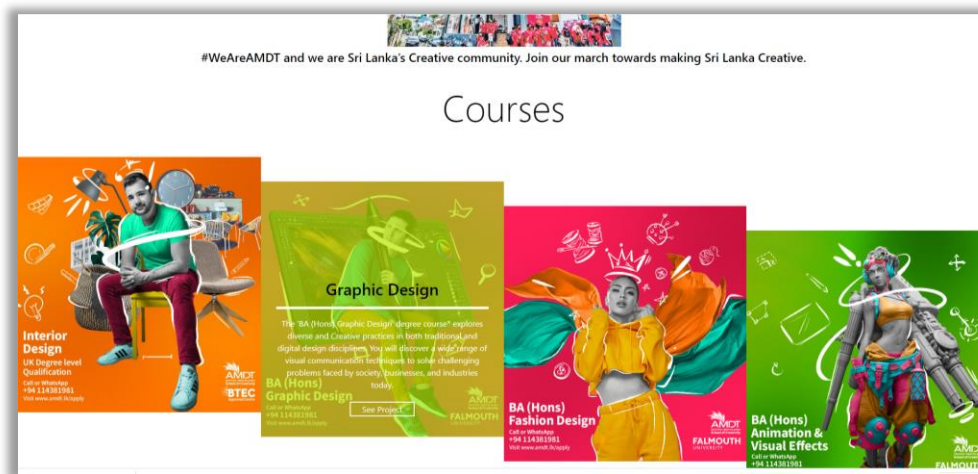

AESTHETIC AND MINIMALIST DESIGN

- Exchanges ought not contain data which is unessential or once in a while required. Each additional unit of data in an exchange rivals the important units of data and decreases their relative visibility.
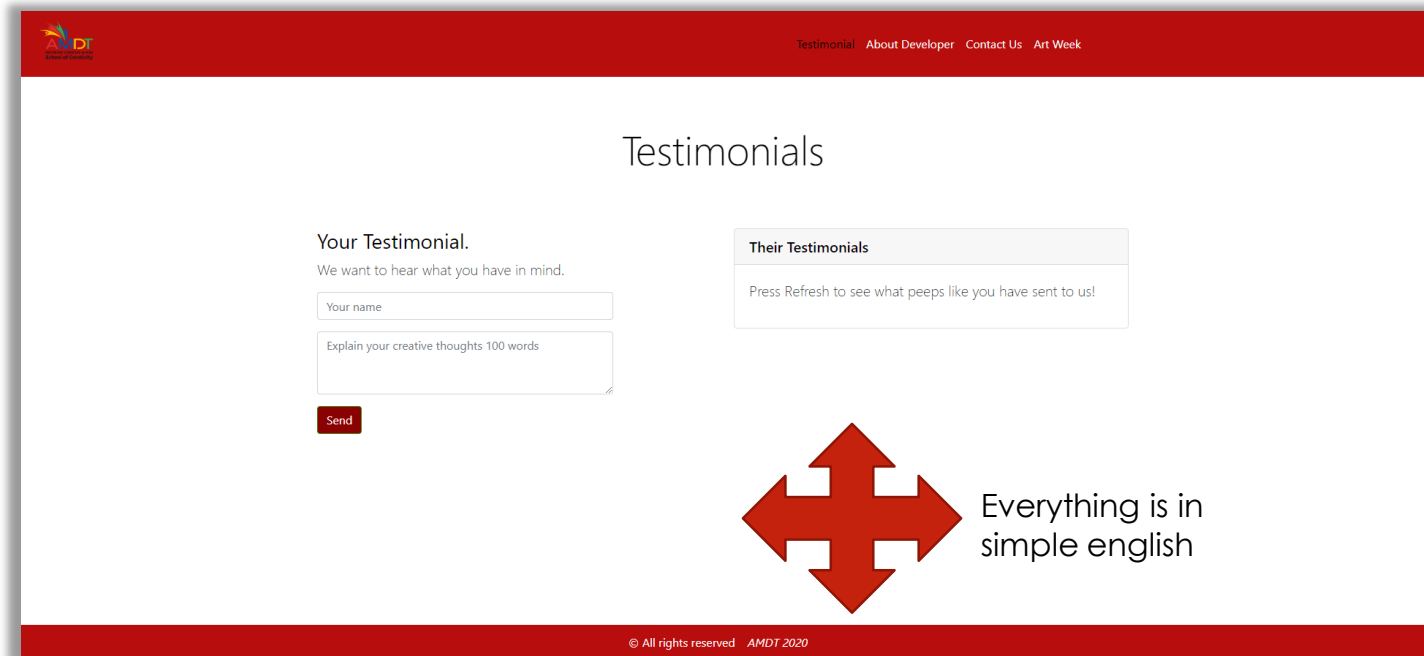

RECOGNITION RATHER THAN RECALL

- Limit the client's memory load by making items, activities, and choices noticeable. The client ought not need to recollect data starting with one piece of the discourse then onto the next. Guidelines for utilization of the system ought to be noticeable or effectively retrievable at whatever point suitable.

MATCH BETWEEN SYSTEM AND THE REAL WORLD

- The system ought to communicate in the clients' language, with words, expressions and ideas natural to the client, instead of system-situated terms. Follow genuine shows, causing data to show up in a characteristic and consistent request.

- So basically the site is built for anyone who understands english.

USER CONTROL AND FREEDOM

- Clients often pick system works accidentally and will require an unmistakably checked "crisis exit" to leave the undesirable state without experiencing an all-encompassing exchange. Backing fix and re-try.

- So if you encounter a problem clicking on amdt logo in the navigation bar will put you back to the homepage.
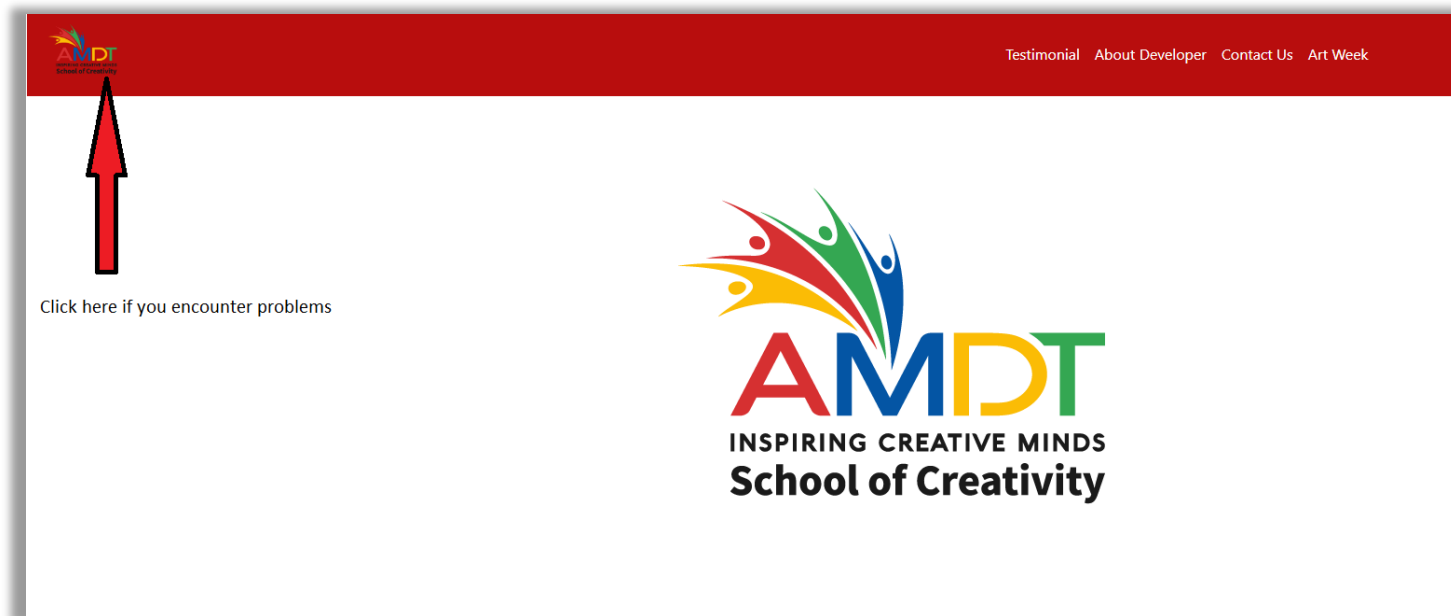

FINAL OUTCOME

Landing Page
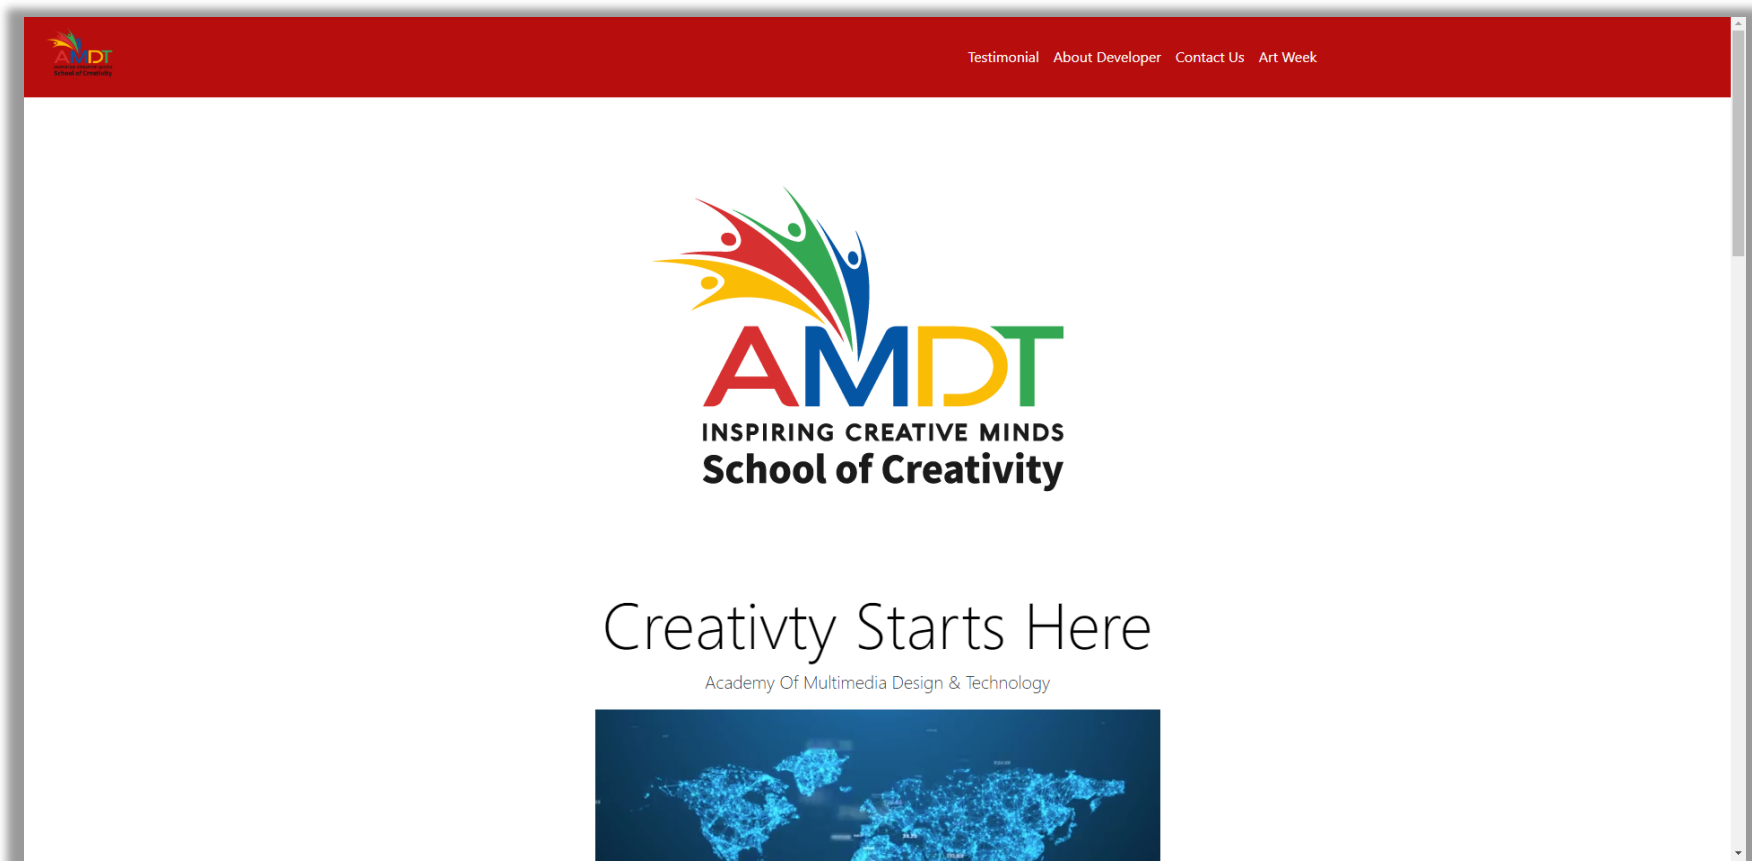

This is the homepage for the website, where you can access your needs.

Testimonials Page

This is the Testimonials page, So if you have something creative in your mind drop it out so everybody can hear about it.

About Developer Page

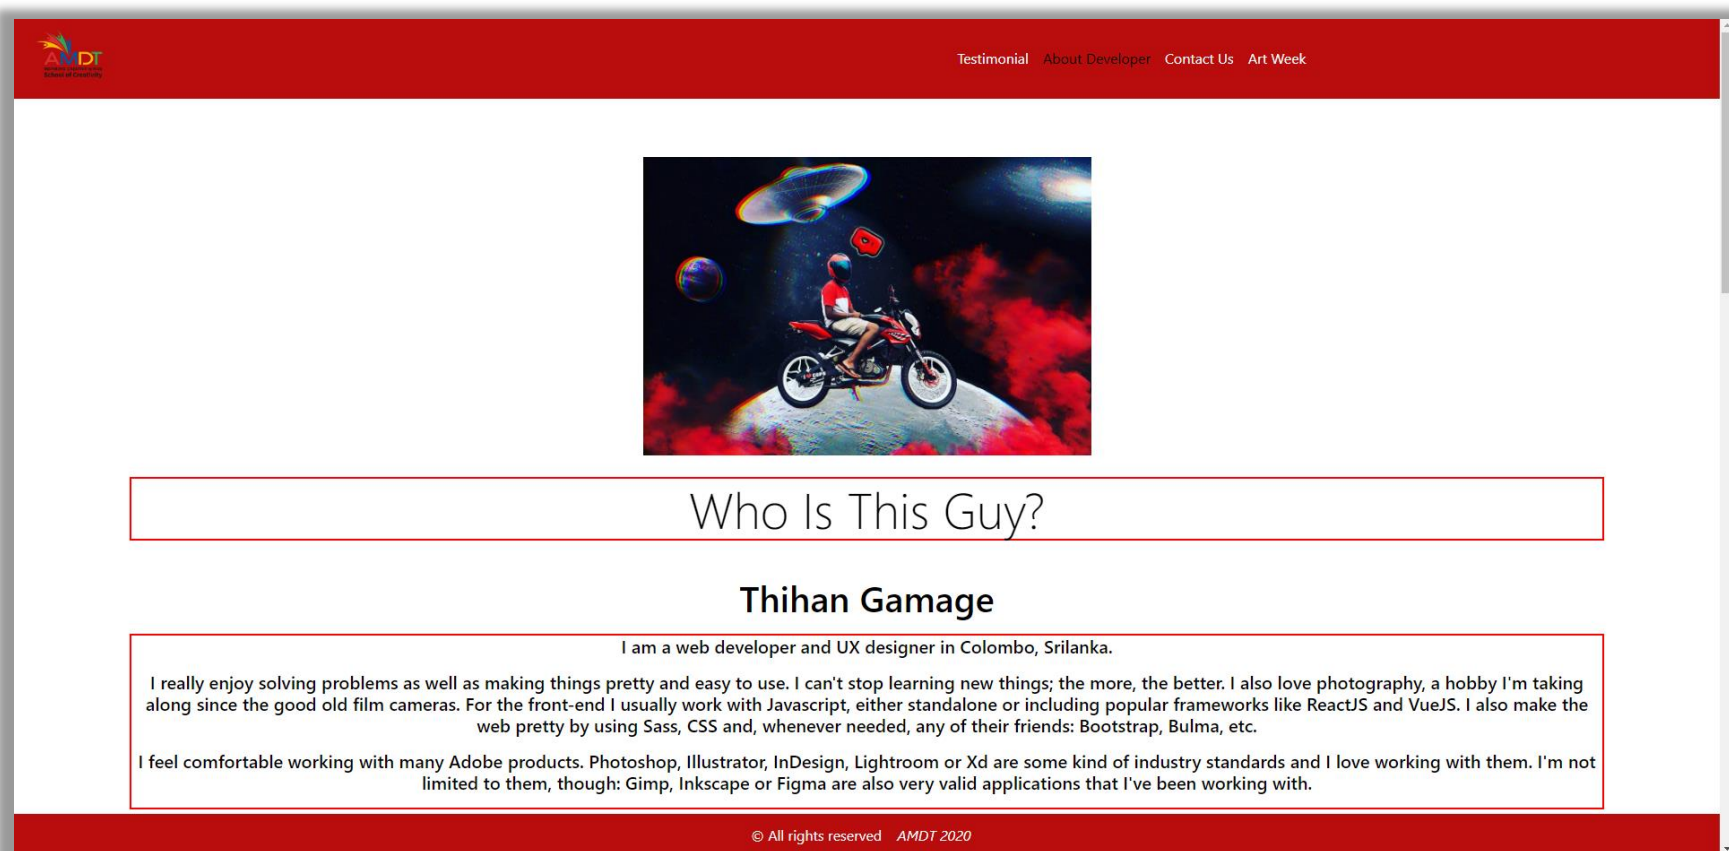

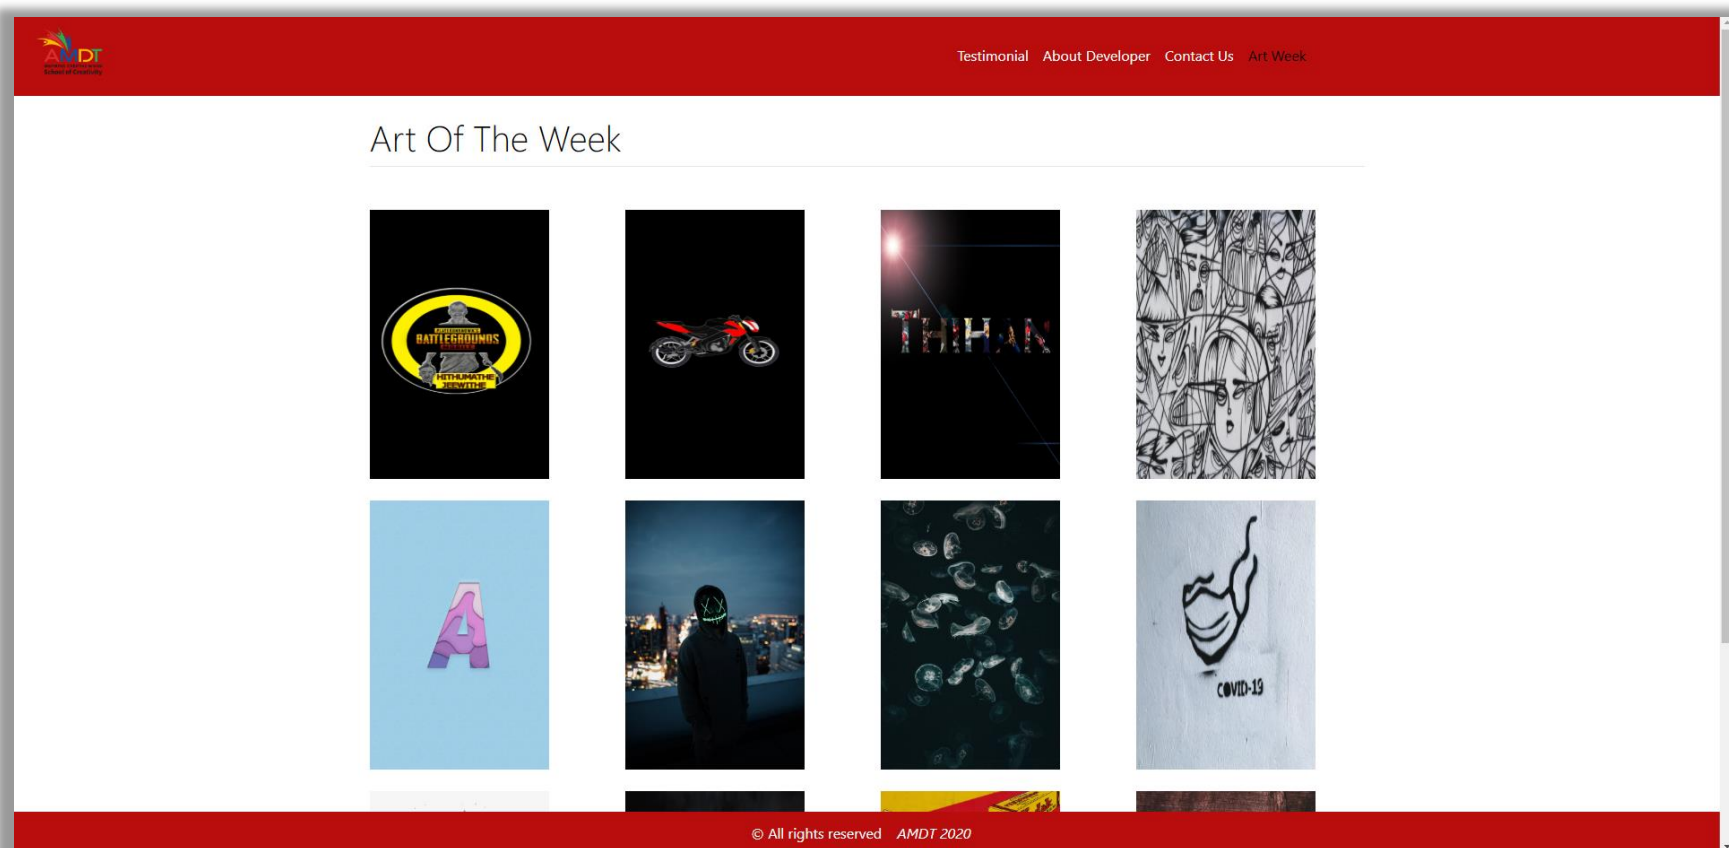

This is the porfolio page, where we talk about the developer.

Contact Us Page

This is the contact page where you can contact AMDT for information,

Art Week Page

This page contains the best art of students of the week.
